

The Extremophile Campaign: In Your Home

Teacher Guide

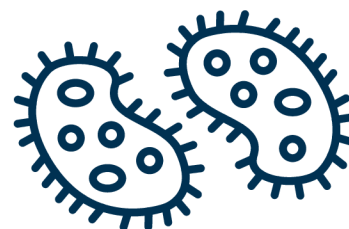

Seed[®]

Start Here

Want to get your students involved in The Extremophile Campaign: In Your Home project? Create an account (Teachers only!) on [CitSci](#). Then use the project search to find the project and join it!

The CitSci platform is designed for use by adults. To keep students safe, we recommend teachers manage one account on behalf of their classroom. Please do not upload personally identifying information about students, including photos of their faces, to CitSci.

Look for weird microbes!

Go on a microbe hunt! Have students look for places at school or at home where weird stuff is growing! Take photos of what you find!

Tell us what you found

Visit the project website and click the blue Add Data button. Fill out the datasheet and upload your photo to share what you've found.

Wait patiently

This is the hardest part. Our science team reviews every observation that comes in and selects the best ones for official sampling. If your sample is selected, we'll contact you via email about sending a sampling kit!
